DOLAV® GIVES WASTE A SECOND CHANCE

PAPER

Collecting quality waste paper for recycling requires a robust container which can be safely mechanically inverted and which takes abuse when left on clients premises. **DOLAV®** offers reserves of strength and integral runners which absorb the shocks.

WEEE

Collection of electrical and electronic waste often requires lockable container systems, sometimes extra long boxes for fluorescent tubes, **DOLAV®** offers a range of sizes and specifications.

CHICKEN CARCASS DISPOSAL

Some poultry is lost during the growing process and carcasses must be safely composted avoiding contamination. **DOLAV®** offers an approved solution. Please ask for details.

FOOD WASTE

From supermarkets, food processing plants, from the hospitality industry and private homes food waste offers a great energy source if collected and shipped to AD plants. Increasingly **DOLAV®** boxes are used for collection, their tough hygienic design offers years of daily service.

LEAD ACID AND LITHIUM ION BATTERIES

Designed to hold 900 kg of Lead Acid Batteries the **DOLAV® ACE** with 3 integral runners stands up well to the heavy handling of the scrap metal industry. Meeting ADR requirements and having UN certification for use with many dangerous goods makes Dolav a good choice of container supplier.

PET BOTTLES

DOLAV® offer 3 heights of box designed to fit collection machines increasingly installed in supermarkets, and other retail outlets, but these containers find many other applications.
